

On the Bump

Google Sheets Data Backup — Setup Guide

Why Set This Up?

On the Bump stores all pitch data locally on your phone. That means if your browser refreshes, you switch devices, or your phone restarts mid-game, **you could lose everything**. Connecting Google Sheets gives you a live, permanent backup — every pitch is saved to the cloud the moment you record it.

■ Complete this setup before your first game. It only takes about 5 minutes and you only do it once per team/season.

What You Need

- ✓ A Google account (Gmail)
- ✓ Google Sheets (free, browser or phone)
- ✓ About 5 minutes

1

Create a New Google Spreadsheet

Go to **sheets.google.com** and click the large + button to create a blank spreadsheet.

Name it something you will recognize, for example:

On the Bump — Garner 15u 2026

✓ One spreadsheet per pitcher / team per season works best. You can run the same pitcher against every opponent all season in one sheet.

2

Open the Apps Script Editor

Inside your new spreadsheet, click the menu:

Extensions → Apps Script

A new browser tab opens with the script editor. You will see a default empty function — delete it completely.

3

Paste the Webhook Code

Copy the entire contents of the file **apps-script.js** (provided alongside this PDF) and paste it into the script editor.

Then click the **floppy disk icon** (or press Ctrl+S / Cmd+S) to save. Name the project anything you like — *OnTheBump* works fine.

✓ The script is read-only from your end — you never need to edit it. Just paste and save.

4

Deploy as a Web App

In the Apps Script editor, click:

Deploy → New deployment

Fill in the deployment settings exactly as shown below:

Setting	Value
Type	Web App
Description	On the Bump webhook (or anything you like)
Execute as	Me (your Google account)
Who has access	Anyone

■ "Who has access: Anyone" does NOT make your spreadsheet public. It only allows the webhook URL to receive data — your sheet remains private in your Google account.

Click **Deploy**. Google may ask you to authorize the script — click **Authorize access**, choose your Google account, and click **Allow**. This is normal and safe.

5

Copy Your Web App URL

After deploying, Google shows a **Web App URL**. It looks like this:

`https://script.google.com/macros/s/AKfycb.../exec`

Copy this URL — you will paste it into the On the Bump app in the next step.

✓ Save this URL somewhere safe (notes app, email to yourself). If you lose it you can always find it again:
Deploy → Manage deployments.

6

Connect the App

Open **On the Bump** in your browser and go to the startup screen.

In the **Data Backup** card at the top:

1. Tap the URL input field
2. Paste your Web App URL
3. Tap Connect
4. The card turns green with a checkmark — you are connected

✓ The URL is saved permanently to your device. You will not need to re-enter it unless you clear your browser data or switch to a new device.

7

Initialize the Sheet (First Time Only)

Back in the Apps Script editor, run the **setupSheet** function once to create the header row and column formatting:

Run → Run function → setupSheet

You will see a green checkmark and a pop-up: *"Sheet initialized! Headers and formatting are ready."*

You can also skip this step — headers are created automatically the first time a pitch is recorded from the app.

Verifying the Connection

Start a game in On the Bump and record one test pitch. Then open your Google Sheet — you should see a new row appear within a few seconds with all pitch details filled in.

■ If no row appears after 30 seconds: (1) confirm the URL was copied correctly with no extra spaces, (2) check that the deployment is set to "Anyone" access, (3) re-authorize the script if prompted.

Sheet Column Reference

Col	Header	Description
A	Game ID	Unique ID per game session
B	Timestamp	Date and time the pitch was recorded
C	My Team	Your team name from the startup screen

D	Opposing Team	Opponent name from the startup screen
E	Pitcher #	Pitcher jersey number
F	Pitcher Name	Pitcher name (updates for relief pitchers)
G	Batter #	Batter jersey number
H	Batter Name	Batter name
I	Handedness	L or R
J	Lineup Pos	1–9 (or higher) in the batting order
K	At-Bat #	How many times this batter has faced your pitcher
L	Pitch # in AB	Pitch number within the current at-bat
M	Balls Before	Ball count before this pitch
N	Strikes Before	Strike count before this pitch
O	Pitch Type	FB / CB / SL / CH
P	Zone	Strike or Ball
Q	Pitch Location	Z1–Z9 for strikes; B-High, B-Low, B-In, B-Out for balls
R	Action	Swing / Look / In Play
S	Result	Ball / Strike / Foul / K / K-look / BB / In-Play
T	Balls After	Ball count after this pitch
U	Strikes After	Strike count after this pitch
V	Hit Type	ground-ball / line-drive / fly-ball / pop-up
W	Hit Type Name	Ground Ball / Line Drive / Fly Ball / Pop Up
X	Hit Result	out / error / single / double / triple / home-run
Y	Hit Result Name	Out / Error / 1B / 2B / 3B / HR
Z	Hit Zone	Field zone: LF, CF, RF, SS, 3B, 2B, 1B, etc.
AA	Hit X	Horizontal spray chart coordinate (0.0–1.0)
AB	Hit Y	Depth spray chart coordinate (0.0–1.0)
AC	Runner 1B	Yes / No — runner on first at time of pitch
AD	Runner 2B	Yes / No — runner on second at time of pitch
AE	Runner 3B	Yes / No — runner on third at time of pitch
AF	Outs	0 / 1 / 2 — outs in the inning at time of pitch
AG	Base State	Empty / 1B / 2B+3B / Loaded / etc.
